

Multiple Body Parameters

You can create multiple pydantic models/ body parameters and use them inside an api route.

```
class Product(BaseModel):
    name:str
    price:int
    discount:int
    discounted_price:int

class User(BaseModel):
    name :str
    email:str

@app.post('/purchase/')
def purchase(user:User,product:Product):
    return {"user":user,"product":product}
```
